POPIS

Safety footwear LITEVAAG S1PS ESD is a great choice for everyone who spends many hours during a shift standing, walking in a hard floor and highly wear-demanding indoor environments. The construction and material composition is what makes this model so comfortable. Mixture of double-density polyurethane increases the impact energy absorption during walking. Last but not least is the low weight of LITEVAAG which is achieved not only by the usage of aluminum safety toe cap and composite anti-penetration midsole but also thanks to the breathable textile material of upper. Furthermore, there are reinforcements in the toe cap and heel area to prolong the lifespan of the upper. LITEVAAG – comfortable and durable safety shoes.
